- English (Fluent)

PROFILE

Full-stack developer with expertise in Python, Django, JavaScript, and blockchain applications. Skilled in building scalable web platforms, APIs, and decentralized apps. Strong background in delivering end-to-end solutions from responsive frontends to secure backends and Web3 integrations. Proven ability to solve complex problems, write clean maintainable code, and deliver projects that align with client business goals.

WORK EXPERIENCE

Software Engineer

2030 - PRESENT

MILD

- Developed multiple full-stack projects including e-commerce platforms, REST APIs, and blockchain dApps (wallet integrations & NFT minting).
- Founded and currently leading Mild, a small tech initiative delivering custom web and blockchain solutions for clients.
- Coordinated client communications, project planning, and delivery successfully completed 3+ projects within deadlines.

Software Engineer

2025 - 2029

APTECH

- Built and documented RESTful APIs for student management and e-learning platforms, improving system integration and reducing manual work.
- Collaborated with a team to design and deploy web applications using Django and JavaScript, ensuring secure authentication and robust backend logic.

Software Engineer

2024 - 2025

SCHOOL AND IT DEPARTMENT

- Developed small automation scripts in Python to streamline routine administrative tasks, cutting processing time by 20%.
- Supported the IT team in database management and student portal updates, reducing downtime by 15%.
